

Eruotor Avwerute Noel

Web3 Frontend Engineer

Abuja, Nigeria | noeleruotor23@gmail.com | (+234) 913 634 1985 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Veritas University Abuja, Nigeria

Expected Graduation: July 2027

B.S. in Software Engineering — Concentration: Web and Mobile Development

- GPA: 4.10 / 5.00
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Web & Mobile Development, Internet Technologies

EXPERIENCE

Software Engineering Intern — Nigerian Meteorological Agency (NIMET)

Jul 2026 – Aug 2026

Abuja, Nigeria

- Built an Aviation Weather Briefing Portal (Python, Streamlit, SQLite) that parses live METAR/TAF feeds for Nigerian airports, giving briefing officers one consolidated real-time view instead of manually cross-referencing raw text reports
- Designed a dark, ops-room-style interface with a live data-fetch layer and auto-refresh loop, keeping flight-weather conditions current without manual polling by staff

Frontend Engineering Intern — FlexiSaf Edusoft

Jul 2025 – Present

Abuja, Nigeria

- Build dashboards and frontend interfaces surfacing dynamic metrics, prioritizing clarity, responsiveness, and modern visual styling
- Develop UI components in HTML, CSS, and JavaScript, applying GSAP-driven animation and transitions to turn static layouts into interactive, user-friendly experiences

PROJECTS

Collabo — Real-Time Collaborative Web IDE

2026

- Built a full-stack, browser-based IDE that lets multiple developers co-edit and run code in the same isolated environment simultaneously, removing the need for local environment setup or screen-sharing during pair programming and technical interviews
- Engineered real-time filesystem sync and multiplayer presence/cursors per isolated room using Next.js and Convex, keeping concurrent edits conflict-free across all connected clients
- Integrated the WebContainers API with Monaco Editor and xterm.js to run a full in-browser Node.js runtime and terminal, replicating a VS Code-like experience entirely client-side, and scoped auth/session isolation with Clerk so each room's files and users stay fully sandboxed

Multi-Token Staking Protocol — DeFi Smart Contract Suite

2026

- Designed and deployed a Solidity staking protocol to the Sepolia testnet with Foundry, letting users stake multiple ERC-20 token types and earn proportional rewards without a centralized custodian holding funds
- Backed the contracts with a Foundry fuzz-test suite covering staking, reward-accrual, and withdrawal edge cases to catch exploitable logic before deployment
- Built a companion frontend with Wagmi v2, Viem, and RainbowKit that translates on-chain contract state into a responsive, wallet-native interface, closing the common DeFi UX gap where users can't see real-time stake balances or accruing rewards without reading a block explorer

LEADERSHIP & ACTIVITIES

General Secretary — NACOS, Veritas University Abuja

- Elected General Secretary; own official correspondence, meeting minutes, and organizational documentation for the student tech association, and maintain a NACOS Notion workspace with a task board and media pipeline coordinating committee activities

Member — Ministers of Hospitality, Veritas University Abuja

Jan 2024 – Present

- Support event coordination by welcoming guests, managing audience flow, and ensuring a positive campus experience, drawing on strong communication and attention to detail

Member — Coding Club, Veritas University Abuja

Jun 2024 – Present

- Collaborate with peers on projects using HTML, CSS, JavaScript, and React.js, and engage in technical workshops and coding challenges to sharpen problem-solving skills

SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, React Three Fiber, GSAP, React Native, Flutter

Web3: Solidity, Foundry, Wagmi v2, Viem, RainbowKit, Ethers.js

Backend: Node.js, Python, PostgreSQL, Convex, Streamlit, SQLite, Spring Boot

Tools: Git, Figma, VS Code, Agile/Scrum, Android Studio, IntelliJ
